

## Dataset Cleaning

- There were some duplicates found within the consolidated data. This was due to...
  1. Participants with two different cadre ID's
  2. One row with SELPA/District info while the other row didn't within the same participant.
  3. Two rows with different SELPA/District info within the same participant
- For the first two cases, I cleaned the data by deleting the rows, but the data needs to be cleaned further with the 3<sup>rd</sup> case.
- Therefore, the numbers below are approximate numbers, and it might decrease further as we deal with the duplicate data that fall within the 3<sup>rd</sup> case.
- I believe we should deal with these duplicate cases before merging CDE data, as CDE data is based on SELPA's and Districts.
