

Dataset Cleaning

- There were some duplicates found within the consolidated data. This was due to...
 1. Participants with two different cadre ID's
 2. One row with SELPA/District info while the other row didn't within the same participant.
 3. Two rows with different SELPA/District info within the same participant
- For the first two cases, I cleaned the data by deleting the rows, but the data needs to be cleaned further with the 3rd case. -> Done
- Therefore, the numbers below are approximate numbers, and it might decrease further as we deal with the duplicate data that fall within the 3rd case.
- I believe we should deal with these duplicate cases before merging CDE data, as CDE data is based on SELPA's and Districts.
- Ineligible participants were removed.

Number of Overlapping Data between/within Two Factors

***Out of 3037 unique participants (only eligible ones)**
